# SUSTAINABLE DEVELOPMENT GOALS (SDGS)

**SDG 9: Industry, Innovation, and Infrastructure (Primary Goal)**

- **Focus:** Building resilient infrastructure and fostering innovation.
- **Application:** The project introduces a digital framework for inventory management, replacing manual processes with automated .NET and Web API solutions. This innovation strengthens the digital infrastructure of small-scale retail and wholesale businesses.

**SDG 12: Responsible Consumption and Production**

- **Focus:** Ensuring sustainable consumption patterns.
- **Application:** By implementing **Real-time Stock Tracking** and **Low-Stock Alerts**, the system prevents over-ordering and stock expiration. This leads to a significant reduction in material waste, promoting responsible resource management.

**SDG 17: Partnerships for the Goals**

- **Focus:** Strengthening the means of implementation and revitalizing global partnerships.
- **Application:** This project acts as a bridge between **Suppliers, Management, and Customers**. By integrating data across these different stakeholders, it promotes a collaborative ecosystem. The use of open-source technologies (like MySQL and Bootstrap) and API-based integration demonstrates how technology can facilitate partnerships to achieve efficient business goals.
